Systems Integration, Video Surveillance
Home Theater Installations
Home Network & Network Printing
Media Solutions – Custom Servers,
Workstations, and SANs
Standard Business IT Support
Hardware & Software Installs
Virus, Spyware, and Adware Removal
Data Recovery

THE WAY WE WORK

Integration

We provide every element of technology integration for a number of companies, including our own, and do so with a particular attention to cost effectiveness. We believe that a company's assets are limited, and should therefore be utilized wisely. This is especially true when it comes to making technology purchases, as well as managing the cost of IT support.

Technology Planning

One of our specialties is in technology planning. We enjoy looking at a company's unique situation and making suggestions on how to improve efficiency, and make the lives of the employees easier. This way, they can focus on accomplishing their jobs, rather than expending their efforts on tech inefficiencies.

Custom Solutions

We tend to help companies who have unusual requests, which aren't covered under normal computer support training. This includes integration of specific assets and resources, or analyzing specific needs, and recommending and implementing cost effective solutions.

The Bottom Line

We try to avoid the potential conflict of interest, where a solution requires extensive IT support, which can turn out to be a more expensive long term expenditure than a less tech heavy solution.

Improved Productivity Solutions

We prefer to look at technology solutions the way we do for our own company, which is to find efficient, effective solutions which don't cost us any more than necessary, either financially, or in human resources. We look for solutions which save the company money either in equipment purchase price, or in setup and support costs.

Reduced IT Support Costs

This philosophy has allowed us to provide part time support for companies that otherwise would have to hire a fulltime tech position; and we have done this with no real detriment to the company. This has ultimately saved the company considerable IT support costs, while maintaining full functionality.

HOW WE ARE DIFFERENT

Efficiency:

1. We offer remote support solutions, which allow us to respond more quickly if the computer is online, and allows us to charge a lower rate since we don't have to cover our travel time and costs.
2. We look for ways to improve your workflow by understanding what works in your environment, and what could be improved. We try to enhance your technology experience by refining your technology mode of operations.
3. We value efficiency. Proper implementation improves employees' work experience, allows them to do their jobs better, and improves morale.
4. As systems integrators, we are used to finding custom solutions to unusual requests, on a budget. Our solutions are designed to save money in the short and long term, by reducing overall technology expenditures, and support costs.

Integrity:

1. We do our best to save our clients money while offering them solid solutions. This comes naturally since it is how we approach solutions for our own business.
2. We prefer a business approach that promotes referrals and return business from satisfied customers.
3. We treat our customers with the respect and priority with which we would want to be treated.
4. We are experienced with handling confidential data, and will keep your data secure and confidential, meeting or exceeding HIPAA guidelines.

AREAS OF SPECIALTY

Media Solutions:

Custom Computer Systems including Servers, Render Farms, High Definition Non-Linear Editing Machines, 2D and 3D Graphics Workstations, Multitrack Audio Recording Workstations, SANs, Highspeed Media Networking with Optimized Routing for Media Servers and Video Streaming. Mac & PC Interoperability Solutions.

Healthcare Solutions:

Health Care (HIPAA Compliancy and Encryption) Security Solutions (Wireless Security & Encryption) Firewalls, Sonicwall, WPA2, 256 bit Encryption, Encrypted Flash Drives, Biometric Scanning.

Web Solutions:

Webpage and WEB Utilities like Bulletin Boards, Forums, Tech Tickets, Custom Forms, Mailing Lists, Auto-Responders, Global Address Book, LDAP, POP & SMTP Email with Web Accessible Interface, Redirects, Web Calendar, SSL Secure Site Setup.

WHAT WE OFFER

Advanced Solutions for individuals as well as businesses.

Tailored Technology Solutions to address your specific needs.

Inexpensive, Efficient, and Effective Solutions.

Strategic Technology Planning that improves your company's efficiency and lowers IT support costs.

Excellent Debugging Skills, so we can fix your problems quickly, which matters when you are paying by the hour.

WHY CHOOSE US?

We offer several packages for companies requiring regular, scheduled on-sight support.

We can translate complicated computer concepts into understandable language, so you don't have to know the lingo.

And - oh yeah, we think we're pretty personable too.

About us:

Computer Werks LLC is a family owned business.

Owner, Heath Firestone has been working professionally with computers since 1993. He has built hundreds of custom high end computers for a variety of applications. He has also taught seven different subjects at three different colleges, and betatests for a number of film industry hardware and software companies. He also owns Firestone Studios LLC, which has an advanced visual effects studio, which is unique in the film industry, in that it utilizes realtime camera tracking on a 360 degree retroreflective compositing stage.
